

Extract Organizations

Menu path

Data Preparation > Database > NSF > Extract Organizations

Description

Extracts a table containing one row per organization from an NSF database.

Analyses

The output table will include the following:

- *awards*: The number of distinct awards associated with this organization.
- *total_awarded_amount_to_date*: The total award amount among awards associated with this organization.
- *earliest_award_start_date*: The earliest start date among awards associated with this organization.
- *latest_award_expiration_date*: The latest expiration date among awards associated with this organization.

Usage Hints

Load an NSF file into the tool, then create a database from it using [the NSF database loader](#).

For a quick analysis of a small dataset you may wish to [merge together investigator entities with identical names](#). For a scientifically sound analysis of a larger dataset, you can [specify your own merging orders](#) then [perform them](#).
