

KEYWORD

This table contains keywords and their types. Currently, there are two known and supported types of keywords:

- *Original Keywords*: Keywords assigned to documents by their authors. Found in the "DE" ISI field. Keywords of this type have the value `authorKeywords` in the *TYPE* field of this table.
- *New ISI Keywords*: Keywords assigned to documents by ISI. Found in the "ID" ISI field. Keywords of this type have the value `keywordsPlus` in the *TYPE* field of this table.

This table contains the following fields:

- *PK*: Automatically generated. Guarantees uniqueness.
- *KEYWORD*: The exact (keyword) string as found in the "DE"/"ID"/etc.
- *TYPE*: Determined by which keyword field this keyword was found in. Look above for possible values.

The combination of *KEYWORD* with *TYPE* also guarantees uniqueness.

See [DOCUMENT_KEYWORDS](#) for additional details.
