Hackathon

The workshop will have a hackathon section where participants will form their own team. Each team will create a new CIShell / Sci2 plugin, such as the Average plugin, Text Normalizer plugin, Burst Detection plugin, or Community Detection plugin. You can choose to wrap an existing Java algorithm as a CIShell / Sci2 plugin. It is always good to think ahead for a suitable Java plugin.

Important: The workshop will require a laptop or notebook that can be used for development.

These are the tools needed. Download and unzip the tools before attending the workshop.

- Eclipse for Java EE Developers (Juno or Kepler): <http://www.eclipse.org/downloads/>
- CIShell executable: <http://cishell.org/nightly/2.0.0.201310290006NGT/>
- Sci2 executable: <https://sci2.cns.iu.edu>
- Java 6 (or 32-bit Java 7): <http://java.com/en/download/>
