

# Extract Awards

## Menu path

Data Preparation > Database > NSF > Extract Awards

## Description

Extracts a table containing one row per award from an NSF database.

## Analyses

The output table will include the following:

- *award\_number*: The award number of this award.
- *title*: The title of this award.
- *start\_date*: The starting date of this award.
- *expiration\_date*: The expiration date of this award.
- *last\_amendment\_date*: The last amendment date of this award.
- *awarded\_amount\_to\_date*: The total amount awarded to date.
- *investigators*: The number of investigators of this award.
- *award\_instrument*: TODO: Document me!
- *nsf\_directorate*: TODO: Document me!
- *nsf\_organization*: TODO: Document me!
- *abstract\_text*: TODO: Document me!

## Usage Hints

Load an NSF file into the tool, then create a database from it using [the NSF database loader](#).

For a quick analysis of a small dataset you may wish to [merge together investigator entities with identical names](#). For a scientifically sound analysis of a larger dataset, you can [specify your own merging orders](#) then [perform them](#).
