

Extract Awards

Menu path

Data Preparation > Database > NSF > Extract Awards

Description

Extracts a table containing one row per award from an NSF database.

Analyses

The output table will include the following:

- *award_number*: The award number of this award.
- *title*: The title of this award.
- *start_date*: The starting date of this award.
- *expiration_date*: The expiration date of this award.
- *last_amendment_date*: The last amendment date of this award.
- *awarded_amount_to_date*: The total amount awarded to date.
- *investigators*: The number of investigators of this award.
- *award_instrument*: TODO: Document me!
- *nsf_directorate*: TODO: Document me!
- *nsf_organization*: TODO: Document me!
- *abstract_text*: TODO: Document me!

Usage Hints

Load an NSF file into the tool, then create a database from it using [the NSF database loader](#).

For a quick analysis of a small dataset you may wish to [merge together investigator entities with identical names](#). For a scientifically sound analysis of a larger dataset, you can [specify your own merging orders](#) then [perform them](#).
